The Free Google AI Marketing Stack

How to replace a ₹15,000–20,000/month marketing tool stack using four free Google AI tools — AI Studio, Nano Banana Pro, Stitch & Opal.

TECHNOCRATS DIGIMATE | *Digital-first growth systems. Always one step ahead.*

WHY THIS MATTERS

AI adoption isn't ChatGPT captions

Most marketers think they've “adopted AI” because they use ChatGPT for captions. That's not adoption — that's one tool doing one small task.

Real AI adoption means building a system: campaign ideas, ad creatives, landing page concepts, and automated workflows — all generated, tested, and iterated faster than any traditional agency stack can move.

Google has quietly released four free AI tools that, used together, cover almost the entire top-of-funnel marketing workflow. Here's exactly what each one does and how to use it.

TOOL	REPLACES	BEST FOR
Google AI Studio	Strategy consultant / brainstorming calls	Campaign & content ideas
Nano Banana Pro	Freelance graphic designer	Ad creatives, static ads
Stitch	UI/UX designer for quick concepts	Landing page concepts
Opal	No-code automation tool (Zapier-lite)	AI workflows without code

"Tools don't make money. Systems make money. The goal isn't to use more AI tools — it's to connect them into one workflow that runs without you."

THE TOOLKIT · 4 TOOLS

Tool-by-tool breakdown

TOOL 01

Google AI Studio

Your always-on strategy brainstorming partner — built on Gemini.

WHAT TO USE IT FOR

- Generate campaign angles and content pillars in minutes, based on your niche and audience.
- Stress-test ad hooks and headlines before you brief a designer or spend budget.

- Build structured content calendars by feeding it your offer + target audience.
- Turn a single case study into 10 content angles for different platforms.

TRY THIS PROMPT

"Act as a performance marketing strategist. I run a [study abroad / real estate / clinic] business targeting [audience]. Give me 10 campaign angles based on pain points, each with a hook, core message, and CTA direction."

TOOL 02

Nano Banana Pro

AI image generation model for high-quality ad creatives and static ads.

WHAT TO USE IT FOR

- Generate scroll-stopping static ad creatives without hiring a designer for first drafts.
- Create multiple creative variations of the same ad fast, for A/B testing.
- Build branded visual concepts you can hand to your designer to polish.
- Produce product mockups, before/after visuals, and lifestyle-style imagery.

TRY THIS PROMPT

"Create a bold, high-contrast static ad creative for [offer]. Style: premium, minimal, [your brand colors]. Include space for a headline at the top and a CTA button at the bottom."

TOOL 03

Stitch

Google's AI tool for turning ideas into UI/landing page concepts fast.

WHAT TO USE IT FOR

- Turn a rough landing page brief into a visual concept before writing a line of code.
- Test 2–3 layout directions for a lead-gen page in one sitting.
- Give your developer a clear visual reference instead of a text description.
- Prototype microsites for events, webinars, or seasonal campaigns quickly.

TRY THIS PROMPT

"Design a landing page concept for a lead-gen offer: [offer name]. Sections needed: hero with headline + CTA, 3 benefit blocks, testimonial section, and a lead form. Style: clean, premium, mobile-first."

TOOL 04

Opal

No-code AI workflow builder — connect steps into one automated pipeline.

WHAT TO USE IT FOR

- Chain together research, writing, and formatting steps into one repeatable workflow.
- Automate repetitive parts of content production without touching code.
- Build simple internal tools for your team — no developer required.
- Connect AI outputs (from Studio, Nano Banana Pro) into a single automated pipeline.

TRY THIS PROMPT

"Build a workflow: take a topic as input → generate 3 content angles → write a hook for each → format as a ready-to-post document."

THE SYSTEM

How to stack these together

Used individually, these are just four tools. Used together, in this order, they become a lead-generation production line:

- 1 IDEATE — AI Studio**
Generate campaign angles, hooks, and content pillars based on your audience's pain points.
- 2 CREATE — Nano Banana Pro**
Turn the strongest angles into static ad creatives — multiple variations for testing.
- 3 CONVERT — Stitch**
Design the landing page or lead form concept that matches the ad's promise.
- 4 AUTOMATE — Opal**
Connect the repeatable parts — research, drafting, formatting — into one workflow.

The output of one tool becomes the input for the next. That's the difference between "using AI" and running an AI-powered growth system.

NEXT STEP

Want this system built for your business?

This guide shows you the tools. Technocrats Digimate builds the full system — campaign strategy, ad creatives, funnels, and automation — wired together and running for your business.

Book a free growth audit call

We'll review your current marketing stack and show you exactly where AI can cut cost and increase output — no generic advice, execution-ready plan only.
